Who We Are

AAIPHARMA'S SCIENTIFIC AND PROFESSIONAL teams have provided best-in-class product development expertise since 1979. Our business is founded on partnership and delivery of value. We deliver services ranging from a single test to integrated drug development: consulting, preclinical (oncology), pharmaceutical sciences (formulation, analytical), clinical trial supplies manufacturing and distribution and Ph I-IV international clinical development. We focus on medical and clinical relevance from well-founded First-in-Man and Proof of Concept packages through delivery of cost and time effective dose-defining and pivotal trials, to post-registration support. These services are integrated through international regulatory affairs and project management and supported by state-of-the-art data systems.

Services Offered

AAIOncology – A full-service global unit dedicated to oncology drug development and clinical trial management.

Pharmaceutical Services

- Candidate selection and characterization
- Formulation feasibility studies
- Technology transfer
- Process validation

- Toxicology supply manufacturing, packaging and labeling
- Clinical supply manufacturing, packaging and labeling
- Small scale commercial manufacturing
- Preformulation and formulation
- Method development, refinement and validation
- Protein and peptide analysis and characterization
- N-terminal sequencing and amino acid analysis
- Stability testing and storage

Clinical Services

- Phase I-IV studies for drugs, biologics and devices
*Broad therapeutic expertise with specialized capabilities in oncology, infectious disease and vaccines
- First-in-man studies
- Strategic planning and project management
- Protocol feasibility and investigator recruitment
- Clinical trial material manufacturing and distribution
- Monitoring and site management
- Medical management and medical writing
- Data management and statistical analysis
- E-clinical

Bioanalytical Services

- Bioanalytical testing by LC/MS/MS, GC/MS, ICP/MS, HPLC, electrophoresis, radiochemistry & immunoassays
- Metabolite profiling and mass balance assessment
- Pharmacokinetic and pharmacodynamic screening
- Mammalian cell-based assays, biomarker and CYP 450 analysis
