Vital Statistics

Year Founded: 2006

Key Personnel: Lawrence Lima, Ph.D., vice president

Who We Are

CYANTA DRUG DEVELOPMENT SERVICES is dedicated to solely serving the pharmaceutical and medical device industries. Our

unique background of solving challenging analytical problems and providing drug development services has enabled us to become a premier service provider to the pharmaceutical and medical device industries. With newly renovated facilities and expanded personnel, we have the capacity and experience to meet your drug development goals.

Major Markets

CYANTA PROVIDES CONTRACT RESEARCH services to the pharmaceutical and medical device industries, and specializes in performing regulatory testing in support of regulatory submissions.

Services Offered

- **Analytical Method Development:** Cyanta specializes in providing early phase development and investigative methods for the purpose of material characterization and identification. We also specialize in early phase problem solving and late phase failure investigations.

- **Reference Standard Characterization:** Cyanta provides customized reference standard characterization to suit the needs of our clients. We offer a variety of analytical techniques including NMR, IR, GC/MS, LC/MS, DSC, TGA, Karl-Fischer, ICP and IT/MS.
- **Method Validation and Stability Services:** Cyanta provides both long and short-term stability storage and analytical services including validation of stability indicating assays. Our stability and validation services are also designed to support your product from pre-development through commercialization. We specialize in storing and providing analytical support for APIs, finished products, medical devices and QC release.
- **Extractables and Leachables:** Cyanta leverages its experience with polymers, metals, pharmaceutical products and other matrices to identify the extractable/leachable profile of your medical device. Our analytical equipment, which includes GC/MS, LC/MSⁿ, HPLC and many others, provides us with the tools necessary to characterize, identify, and quantify the extractables and leachables in your product.
- **Custom Synthesis:** Cyanta provide multi-gram synthesis services to support your pre-clinical and toxicology testing. We also provide custom synthesis of reference standards, intermediates, degradants, metabolites and related substances.
