Our Facilities

Committed to providing unsurpassed quality, Bayer Pharmaceutical Manufacturing Services has invested \$150 million to improve its Kansas Contract Manufacturing Site. Strategically located in Shawnee, Kansas, the 52-acre site serves as a central production hub for all of our clients in North America and throughout the world.

The site includes two primary production facilities:

- Shawnee I (212,000 foot²/19,700 meter²) contains laboratory services, packaging, and administration.
- The recently constructed Shawnee II (100,000 foot²/9,290 meter²) is a dedicated pharmaceutical manufacturing facility complete with state-of-the-industry utilities systems including WFI water system, zoned HVAC, HEPA filtration, dedicated steam supply, and class A-F environments.

Also available at the Kansas Contract Manufacturing Site is a world class, fully climate controlled warehousing and distribution center (242,000 foot²/22,500 meter²) commissioned November, 2004, with point of use distribution capabilities.

Our diverse, optimal-sized operation is driven by a highly skilled workforce with expert leadership. More than 130 years of combined pharmaceutical experience guide a dedicated, non-union team of approximately 400 employees who maintain an excellent safety record and regulatory history.

Who We Are

FOR MORE THAN A CENTURY BAYER has maintained a global reputation for unsurpassed quality and commitment to its partners and customers. With state-of-the-industry technology and dedicated staff of more than 400 highly-skilled employees, Bayer Pharmaceutical Manufacturing Services is designed to deliver precision manufacturing of a wide variety of pharmaceutical technologies.

Bayer Pharmaceutical Manufacturing Services offers strategic partners a comprehensive range of solutions to ensure quality, reduce costs, provide reliability of supply, better align manufacturing strategies, or provide assistance to manufacture existing products and bring new products to market.

Approved to meet and/or exceed standards for pharmaceutical manufacturing by both FDA and EU, our Kansas Contract Manufacturing Site is designed with flexibility and innovation to deliver precision manufacturing of a wide variety of pharmaceutical technologies.

Services Offered

BAYER PHARMACEUTICAL MANUFACTURING SERVICES is designed around a broad range of technical capabilities that include:

- Multiple technologies for producing various formulations of pharmaceutical products, including sterile injectables, solid doses, non-sterile liquids, and creams and pastes.
- Full-service life cycle management to handle projects of almost any size and type, at any point along the development-to delivery continuum. Range of service includes commercialization-sized batches, pilot batch production, raw material and packaging component sourcing, primary and secondary packaging, chemical and microbiological laboratory testing, full-service warehousing in temperature and humidity-controlled conditions, and point-of-use distribution.
- A full-time in-house compliance group to ensure that partnered projects meet or exceed increasingly stringent regulatory requirements mandated by authorities in the U.S. and the European Union.
