Who We Are

BRIDGE LABORATORIES IS A PRECLINICAL contract research organization that provides US-level regulatory compliant drug development services globally. Bridge is headquartered in Gaithersburg, Maryland, with lab facilities in the US and Beijing, China. Bridge is known for its extensive work in toxicology; including vaccines, developmental and reproductive toxicology, and safety pharmacology.

In 2008, the FDA accepted data from Bridge's AAALAC accredited facility in China. Bridge's experienced staff both in the US and China ensures that clients are provided with rapid study start scenarios, dynamic scheduling options to meet key client milestones, high quality studies and reports, flexibility and accessibility throughout the process, and on-time follow-through with results.

Major Markets

BRIDGE PROVIDES REGULATORY COMPLIANT drug development services to global clients through our laboratory facilities in the US and China.

Services Offered

BRIDGE IS DEDICATED TO THE CONDUCT of nearly all aspects of preclinical toxicology studies including acute to long-term (carcinogenicity) studies using a variety of species (mice, rats, rabbits, guinea pigs, canines, non-human primates, and minipigs) over a multitude of routes of administration (continuous infusion, dermal, ocular, oral, parenteral, vaginal, rectal, as well as customizable routes).

Bridge has extensive toxicology experience, including: general toxicology, Developmental and Reproductive Toxicology (DART), safety pharmacology (CV, CNS, respiratory), vaccine development, pathology services, bioanalytical services, and DMPK.

Bridge's AAALAC accredited facility in China was among the first laboratories to perform studies according to GLP guidelines for clients worldwide.
