Who We Are

SL PHARMA LABS, INC. is a well-established contract organization offering customized pharmaceutical and related laboratory services to client companies nationwide and internationally.

It has state-of-the-art laboratories and highly qualified and competent staff. We have established a reputation for working with our clients as a true partner and for delivering high quality, customized and cost effective services. The range

of services include: pre-clinical /clinical formulation development; all aspects of sterile product development/technology; aseptic processing; clinical manufacture; analytical methods development/validation & testing; all microbiological aspects of product development & testing; and assistance in technical & regulatory CMC documentation for INDs, NDAs, ANDAs.

Major Markets

SL PHARMA LABS, INC. has served many companies, large or small, across the U.S.A. and also internationally. SL Pharma Labs, Inc. has strategic alliances with other well-established companies to expand our technical offerings to include the development of solid dosage forms and commercial manufacture of various dosage forms.

Services Offered

SL PHARMA LABS, INC. offers a wide range of contract R&D and laboratory testing services covering CMC aspects for product development, clinical manufacture, release & stability testing and full documentation for regulatory registration. These include:

- Formulation development of topical, parenteral, nasal and ophthalmic dosage forms

- Sterile/parenteral product development & technology
- Clinical manufacture of (Phase 1 & 2) parenteral, topical, nasal & ophthalmic products
- Analytical methods development, validation & testing
- Microbiological methods development, validation & testing
- Release testing of raw materials and finished dosage forms
- Cytotoxic and Controlled Drug Substances testing
- Stability testing in accordance with ICH/FDA guidelines
- Cleaning validation including development of analytical methods for cleaning validation
- Lyophilization cycle development
- Pre-clinical microbiological development and evaluation of antimicrobials including antibiotics & antiseptics
- Filter validation studies
- Package integrity evaluation studies
- Development & testing of medical devices and nutraceuticals
- Assistance in technical and regulatory documentation
